Rapid Throughput Solubility Screening Assay Development and Its Applications in Preformulation Jeremy Guo 2007 The method was then used to evaluate the solubilities of Biopharmaceutic Classification Scheme (BCS) class II drugs in animal and simulated human GI fluids. The goal was to establish correlates between in vitro and in vivo drug solubility in the GI tract. Four BCS class II drugs with solubilities ranging from a few mug/mL to over 100 mug/mL were evaluated in simulated GI fluid in both fasted and fed conditions. Method reproducibility was within 15% relative standard deviation. Solubility values from the screening method correlated well with literature values.

Engineering Plant-Based Food Systems Sangeeta Prakash 2022-11-16 Engineering Plant-Based Food Systems provides a comprehensive, in-depth understanding on the technologies used to create quality plant-based foods. This title helps researchers and food processors gain an

understanding of the diverse aspects of plant-based foods, with a focus to meet the current consumers' demand of alternatives to animal products. This is a one-stop source that provides maximum information related to plant-based foods to food science researchers, food engineers and food processing/manufacturers. This book will enhance their understanding of plant-based protein sources, their application, product manufacturing, and bioavailability. In recent years, the emphasis on minimizing environmental footprints (climate change, greenhouse gas emissions, deforestation, and loss of biodiversity) and human health issues related to animal source food intakes has shifted the attention of researchers, dietitians and health professionals from animal-based diets to diets rich in plant-based foods (legumes, nuts, seeds). - Explores the plant sources available for extraction of proteins, the various extraction methods and the quality and functionality of the extracted proteins - Describes existing plant-based foods such as beverages, yogurts, spreads, fermented foods and meats - Provides information related to various plant based functional components such as polyphenols, phytosterols, aromatics and essential oils, etc.

Development of a Sanded Expansive Salt Grout for Repository Sealing Application Alan D. Buck 1985 A sanded version of the basic BCT 1-F expansive salt grout was developed by the US Army Engineer Waterways Experiment Station in early 1983 for use in a test by Terra Tek in the Fall of 1983 in Salt Lake City. This grout is known as TT83. Initial laboratory tests showed this mixture had adequate workability, impermeability, strength, and positive volume change. There were problems with flow when this material was batched for the Terra Tek test. Later investigation indicated this was probably due to use of different equipment with lower mixing capacity. Specimens made from this grout

show over 0.1 percent expansion at an age between 56 and 90 days and about 0.3 to 0.4 at 1 year; expansion testing is being continued at 6-month intervals. It was concluded that this mixture is probably satisfactory for use in repository sealing applications in a salt rock horizon. Originator-supplied keywords: Expansive salt grout, Grout, Nuclear wastes, Repository sealing, Salt grout.

A Comprehensive Textbook on Product Development and Technology Transfer

2025-07-08 This textbook serves as a comprehensive academic resource for postgraduate, and research scholars, faculties and students, pharmaceutical professionals, and industry researchers involved in formulation development, regulatory affairs, and manufacturing processes. The book provides an in-depth understanding of the entire journey of a pharmaceutical product, from conceptualization and laboratory-scale formulation to its eventual large-scale manufacture and commercialization. A major focus is placed on the critical stages of product life cycle management, regulatory strategies, clinical evaluation, and technology transfer procedures—bridging the gap between R&D and commercial manufacturing.

The Application of Functional Genomics, Systems Biology and Drug Development to the Study of Infectious Diseases

Jingchun Zhu 2006 Genomics is creating a paradigm shift in the research of infectious diseases, transforming it from studying a few targets at a time to a genomic scale. We applied three genomic approaches to the study of malaria and its causative agents, a type of intracellular parasites belonging to the genus Plasmodium.

Jeanette Marie Van Emon 1987 *Pharmaceutical Product Development* Chilukuri Dakshina Murthy 2007-02-12 During the last two decades, the pharmaceutical industry has been under pressure to reduce development costs and the time needed to bring drugs to market in order to maximize return on investment and bring treatments to patients sooner. To meet these ends, pharmaceutical scientists working in the differing areas of pharmacy, pharmaceuticals, and phar

Development and Applications in Solubility

Trevor M. Letcher 2007 Solubility is fundamental to most areas of chemistry and is one of the most basic of thermodynamic properties. It underlies most industrial processes. Bringing together the latest developments and ideas, *Developments and Applications in Solubility* covers many varied and disparate topics. The book is a collection of work from leading experts in their fields and covers the theory of solubility, modelling and simulation, industrial applications and new data and recent developments relating to solubility. Of particular interest are sections on: experimental, calculated and predicted solubilities; solubility phenomena in 'green' quaternary mixtures involving ionic liquids; molecular simulation approaches to solubility; solubility impurities in cryogenic liquids and carbon dioxide in chemical processes. The book is a definitive and comprehensive reference to what is new in solubility and is ideal for researcher scientists, industrialists and academics
