Since this is a richer class of functions than polynomials — rational functions with  $q(x) \neq 0$  are polynomials, we expect that rational approximation of degree  $N$  gives results that are at least as good as polynomial

... Definition of Quadratic Approximation The quadratic approximation also uses the point  $x_0$  to approximate nearby values, but uses a parabola instead of just a tangent line to do so. In this chapter we are interested in approximation problems. Generally speaking, starting from a function  $f(x)$  we would like to find a different function  $g(x)$  that belongs to a given class of functions and is ... Definition.  $dx$  and  $dy$  are termed differentials. Differentials are useful when the value of a quantity is unimportant, only the approximate change in the quantity in response to a change in input is desired. As

... This finishes the proof of Weierstrass' theorem. The Weierstrass approximation theorem is of great theoretical value. In fancier language, it says that the vector space of polynomials is dense in the space ... Approximation theory is an established field, and my aim is to teach you some of its most important ideas and results, centered on classical topics related to polynomials and rational functions.
