**Teaching Tough Kids** Mark Le Messurier 2009-12-04 How can you really make a difference for your students? Teaching Tough Kids delivers a refreshing collection of realistic ideas to sustain the organisational and behavioural transformations of all students, particularly those who 'do it tough'; who learn and react differently. They are complex kids who find life tougher than most. Managing their emotion and behaviour presents educators with a spectacular challenge in schools today, and numbers are on the rise. Filled with inspirational case studies, this book focuses on building improved relationships, structures and behaviours, rather than seeing the student as 'the problem' that must be fixed. Highlighting the value of promoting positive connections with students of all ages, the author presents ways to incorporate inclusive ideas into everyday practice and construct pathways for students to become engaged in their learning and achieve success. This stimulating book shows teachers how to: build student connectedness to learning; set achievable goals for each individual child; support emotional stability; strengthen organisation patterns; address behavioural issues; improve homework planning; create friendships and deal with bullying. Teaching Tough Kids takes a particularly close focus on students identified with Learning Disability, Attention Deficit Disorder, Attention Deficit Hyperactivity Disorder, Oppositional Defiant Disorder and Asperger Syndrome. Another group of students with executive functioning difficulties are emerging in schools. These are the kids who have endured neglect or too much stress and uncertainty in their lives and as a result display classic symptoms of hyperactivity, hyper vigilance and impulsivity. Teaching Tough Kids will be of immense interest to teachers, student teachers, staff in Pupil Referral Units, SENCos and all those involved with Behaviour Support work.

[Math Formulas and Equations for Students](#) Peter I. Kattan 2023-12-29 This is a little book for students who wish to have the essential formulas and equations of mathematics in a single easily accessible source. In about 50 pages, the 350 most essential mathematical formulas are listed. Unlike other large books on this topic, there is no need to go through hundreds of pages and thousands of formulas for the student to get the basic equations. The author has searched several books on mathematical formulas and tables and selected only those equations which are essential to the student. The mathematical formulas and equations listed in this book are useful for students and researchers in various fields including mathematics, physics, engineering, etc. Only the most elementary and basic topics are covered including formulas for various geometric shapes, several types of functions (trigonometric, hyperbolic, exponential, logarithmic, etc), the quadratic equation, analytic geometry, derivatives and integrals, arithmetic series, geometric series and Taylor series.

[Music and the Young Mind](#) Maureen Harris 2009-04-16 Maureen Harris has written an early childhood music program that is easily incorporated into the classroom routine. Written for the early childhood educator-experienced or trainee, musician or nonmusician-this book describes a music-enriched environment for teaching the whole child. Now educators can put research into practice and benefit from the wealth of knowledge and research acquired over the centuries on the power of music. With easy-to-follow lesson plans, sing-along CDs (sung in a suitable pitch for the young child), and supporting literature, educators can gain musical confidence as they explore research on child development, learn how to create a music-enriched environment and build musical confidence, see a curriculum time-frame, and follow lesson plans with ideas for further musical creativity and exploration. In addition, the multicultural section shows how to set up an early childhood music setting that maximizes the

benefits of a variety of cultural values and practices. As you read this book you will begin to see music as a biological human need, an incredible vehicle for enhancing intelligence, and a means to connecting and uniting people around the world.
