The Emergence of Land Markets in Africa Stein Holden 2010-09-30

This book is the first systematic attempt to address emerging land markets and their implications for poverty, equity, and efficiency across a number of African countries. The high incidence of poverty and the need for increased agricultural productivity remain acute in rural areas of sub-Saharan Africa, where a lack of secure land rights and a growing scarcity of land relative to the size of the population are becoming increasingly critical issues. Indeed, land issues in the region are high on the international policy agenda. Yet our knowledge about land tenure security and other rural factor markets (such as labor, oxen, manure, purchased inputs, and credit) is far from adequate to formulate sensible policies. The case studies in the book show that, while land markets and especially informal markets have been rapidly emerging in densely populated parts of Africa - and have generally been to the benefit of the poor--their functions remain imperfect. This is due to policy-induced tenure insecurity and the fragmentation of agricultural land. Applying rigorous quantitative analyses, the book provides a basis for taking into account the role of land markets in national land policies. All too often, the authors argue, land policies have been extreme, either prohibiting all land transactions or giving unrestricted freehold rights to a small elite at the expense of the poor. From the long experience in Asia, it is known that such policies are detrimental to both production efficiency and equity of land use. The authors argue that future policies in Africa should work with the markets. Regulations should be imposed only with careful testing that they are having the intended effects. The Emergence of Land Markets in Africa is a resource for teaching in developed and developing countries, as it provides both comprehensive reviews of the literature

and detailed case studies. It is intended to facilitate the dialogue between researchers and policymakers, as well as inspire researchers to go further in their investigations and build an even stronger basis for good policies. The Emergence of Land Markets in Africa is the first publication in the new Environment for Development (EfD) book series. EfD books focus on research and applications in environmental and natural resource economics as they are relevant to poverty reduction and environmental problems in developing countries. The EfD book series is part of the EfD initiative. (www.environmentfordevelopment.org)

Land and Development in Indonesia John F McCarthy 2017-03-09

Indonesia was founded on the ideal of the "e;Sovereignty of the People"e;, which suggests the pre-eminence of people's rights to access, use and control land to support their livelihoods. Yet, many questions remain unresolved. How can the state ensure access to land for agriculture and housing while also supporting land acquisition for investment in industry and infrastructure? What is to be done about indigenous rights? Do registration and titling provide solutions? Is the land reform agenda "e;legislated but never implemented"e; still relevant? How should the land questions affecting Indonesia's disappearing forests be resolved? The contributors to this volume assess progress on these

issues through case studies from across the archipelago: from large-scale land acquisitions in Papua, to asset ownership in the villages of Sulawesi and Java, to tenure conflicts associated with the oil palm and mining booms in Kalimantan, Sulawesi and Sumatra. What are the prospects for the "e;people's sovereignty"e; in regard to land?

Elements of Ecology Robert Leo Smith 1992 Focuses on ecology as a science, yet provides students with the basic background information they need to appreciate how economic and social issues impact on environmental problems.

the student to write all answers in this study guide/workbook. This workbook is interactive because it requires students to do things instead of just read more material. All questions are arranged by chapter modules so students may skip unassigned material. Each module in the study guide refers to the page numbers of the corresponding module in the text. There is a wide variety of questions: multiple-choice questions; tables to be filled in; art to be labeled; true/false questions requiring students to write the correct answer if the statement is false; thought-provoking conceptual questions; boldfaced terms requiring a written definition; list of objectives in fill-in-the-blank format; and other types of questions.
