A Guide to Detracking Math Courses Angela Torres 2023-04-26 Create a pathway to equity by detracking mathematics The tracked mathematics system has been operating in US schools for decades. However, research demonstrates negative effects on subgroups of students by keeping them in a single math track, thereby denying them access to rigorous coursework needed for college and career readiness. The journey to change this involves confronting some long-standing beliefs and structures in education. When supported with the right structures, instructional shifts, coalition building, and educator training and support, the detracking of mathematics courses can be a primary pathway to equity. The ultimate goal is to increase more students' access to and achievement in higher levels of mathematics learning—especially for students who are historically marginalized. Based on the stories and lessons learned from the San Francisco Unified School District educators who have talked the talk and walked the walk, this book provides a model for all those involved in taking on detracking efforts from policymakers and school administrators, to math coaches and teachers. By sharing stories of real-world examples, lessons learned, and prompts to provoke discussion about your own context, the book walks you through: Designing and gaining support for a policy of detracked math courses Implementing the policy through practical shifts in scheduling, curriculum, professional development, and coaching Supporting and improving the policy through continuous research, monitoring, and maintenance. This book offers the big ideas that help you in your own unique journey to advance equity in your school or district's mathematics education and also provides practical information to help students in a detracked system thrive.

Touch Screen Tablets Touching Children's Lives Joanne Tarasuik 2018-02-28 Touch screen tablets have greatly expanded the technology accessible to preschoolers, toddlers and even infants, given that they do

not require the fine motor skills required for using traditional computers. Many parents and educators wish to make evidence-based decisions regarding young children's technology use, yet technological advancements continue to occur faster than researchers can keep up with. Accordingly, despite touch screen tablets entering society more than 5 years ago, we are in the infancy of research concerning interactive media and children. The topic has gained traction in the past couple of years. For example theoretical papers have discussed how interactive media activities differ from physical toys and passive media (Christakis, 2014), and how educational apps development should utilise the four "pillars" of learning (Hirsh-Pasek et al., 2015). Yet there has been little experimental research published on young children and touch screen use.

Traditional Math: An effective strategy that teachers feel guilty using Barry Garelick 2022-11-04

"Despite experiencing our teaching in different times, we are both oriented to traditional math teaching. It wasn't because we were both taught that way, as some may believe, but because that method worked for us and we have seen it work for our students. It is efficient, effective, non-confusing and helped our students develop mathematical reasoning, understanding, and confidence. Most importantly it helped them to be successful." So begins the book on traditional math, which provides a glimpse of what explicit instruction looks like in the classroom for grades K through 8. Barry Garelick and J.R. Wilson are retired math teachers who describe the methods of traditionally taught math that they used in their teaching. Their descriptions serve two purposes: 1) It provides assurance to teachers who may already practice these methods that they are not alone, and 2) For others, it may provide some new ideas.

Middle School Accelerated Math 2020 "IM-6-8 Math. Courses, units, lessons, activities, and representations are sequenced to help students develop an understanding of mathematical concepts, build fluency with procedures, and solve mathematical problems that reflect their lived experiences. Each unit and lesson is designed to build on what students previously learned and is part of a mathematical story that spans units and grade levels. This coherence allows students to view mathematics as a connected set of ideas."--Publisher website.
