The Atmosphere Frederick K. Lutgens 2007 Using everyday, easy-to-grasp examples to reinforce basic concepts, this highly regarded handbook remains the standard introduction to meteorology and the atmosphere - components, problems, and applications. Includes the most up-to-date coverage of topics such as: ozone depletion; the ultraviolet index; temperature; dew point temperature and orographic effects; wildfires and weather; thunderstorms and lightning; the record-breaking Florida hurricane season; effects of air pollution, and more. Incorporates top-quality visuals, including new satellite images and illustrations by the award-winning Dennis Tasa, to demonstrate the highly visual nature of meteorology. Uses a largely non-technical writing style to help readers grasp important concepts. For those interested in learning more about meteorology.

Faculty Development for Teaching Engineering Rajnish Prakash 2012-06-07 There are numerous challenges in India in handling the higher education system. The most compelling challenge is the shortage of "effective" teachers. This book covers almost all aspects required for bringing out 21st century engineers. values, multi-disciplinary knowledge, working in a group, working in international scenarios, knowledge of project management, good written and communication skills, and many such characteristics are required by engineers for successfully performing in their professions. The advent of information technology tools in all spheres of life is another dimension to the essential characteristics. The book will motivate and inspire the readers to take advantage of new emerging technologies and use the same in their projects or research. This book discusses methods and techniques for becoming an "effective" technical teacher since "just" teaching is not sufficient in view of the global trends. The book will particularly be useful for conducting faculty development and faculty induction programmes.
