

Computerised Accounting Information Systems

Core Concepts of Accounting Information Systems Stephen A. Moscové 1997 This book is entirely up to date to reflect recent changes in technology and AIS practice. Covers such subjects as EDI, reengineering, neural networks, client/server, computer security, and events accounting.

Accounting Information Systems Stephen A. Moscové 1987 This textbook for business undergraduates integrates accounting principles and concepts into today's business information systems. This edition has been revised to include an extensive discussion of decision support systems and a new chapter on coding and flowcharting. There are many case studies and sample problems, and the computer supplement has been expanded to reflect the most recent developments in computer hardware and

software. The text employs a prototype organization to examine accounting information systems subject by subject, including management concepts in relation to accounting information systems, the flow of data within an information system, internal control systems and a systems life-cycle analysis.

Accounting Information Systems Marshall B. Romney 2003 This text aims to provide students with the knowledge they need to pursue successful careers in accounting. It reflects how information technology is altering the nature of accounting and discusses how accountants can improve the design and function of accounting information systems.

Design and Implementation of Computer-Based Information Systems N. Szyperki 1979-11-30 Basic considerations on design and implementation of computer-based information systems; Working group: technical aspects of systems design and implementation; Working group: organizational aspects of systems design and implementation; Review.

Accounting Information Systems James L. Boockholdt 1996 This text emphasizes

systems as an accounting discipline, while providing technological competence. There are questions, exercises and cases in each chapter, and accounting applications are described by transaction cycle, providing a logical and structured method of covering material.

Accounting Information Systems Robert A. Leitch 1992 This text shows how to analyze, design and implement accounting information systems, for marketing, production, finance and personnel, that satisfy the transaction processing, reporting and decision-making requirements of management.

Small Business Adoption of Integrated Computerized Accounting Information Systems Ada A. Duffey 2024 Small businesses have a significant impact on the economy of the United States. Although many small businesses lack resources such as technology, integrated computerized accounting information systems (ICAIS) are accessible. An accounting

information system (AIS) can be instrumental in producing financial information for management decision-making. In addition, the ability to automate software, called robotic process automation (RPA), is accessible to small businesses. Accounting systems can be automated to more quickly, easily, and accurately process the data from business transactions and produce financial information. In Essay 1, I used the technology, organization, and environment (TOE) framework to explain ICAIS adoption by small businesses in the United States. I surveyed small business owners using Qualtrics surveys sent out by Centiment, a research company. The survey asked small business owners about their company's technology infrastructure and compatibility, firm size, and owner support of ICAIS. The survey also asked the small business owners about their perceptions of their customer and vendor willingness and capabilities to interact with an

ICAIS. The goal was to capture factors that influence adopting an ICAIS. In Essay 2, I conducted an experiment with small business owners. I hypothesized that small business owners will trust RPA AIS output more when the RPA implementation is conducted by an external accountant versus an internal accountant, and the technology readiness (TR) of owners will positively moderate their trust in automated AIS. In addition, the difference in trust of the RPA AIS output implemented by an external versus an internal implementer is greater for business owners with low TR than for business owners with high TR. Further, I expected small business owners are more willing to commit to continuing with the implementation from an external accountant versus an internal accountant after the use of the RPA resulted in data inconsistencies, extra monitoring, and a higher level of managing exceptions than expected. Lastly, I predicted owners with high TR will be

more likely to continue with the RPA implementation following data inconsistencies, extra monitoring, and unexpected human intervention than owners with low TR. The research provides insight into small business AIS adoption and RPA implementation.

Systems Ulric J. Gelinias 2005

The text focuses on providing skills necessary for a foundation in enterprise risk management--particularly as these risks pertain to information systems and relevant business processes. Fundamental to an enterprise risk management orientation, from an information systems perspective, are the underlying enterprise systems, e-business systems, and controls for maintaining these systems.

Financial Statements II, Accounts from Incomplete Records, Computers in Accounting, Practice Papers (1-3).

Accounting Information Systems Cynthia Heagy 2020-10-02 In contrast to traditional accounting systems textbooks that assume an organization will develop its own accounting system and, therefore, emphasize systems development, this textbook gives students the theoretical foundation and skills they will need to conduct a requirements analysis, search for a commercial solution, and successfully implement the software package selected. Accounting systems in this textbook are events-driven, encompassing the capture and processing of all events (financial and non-financial) required to construct the financial reports that are necessary for managing an organization and for meeting its external reporting requirements. Special emphasis is given to the reporting requirements of

accounting systems, as well as control activities typically found in the generic business processes.
