Schroeder's Antiques Price Guide Editors of Schroeder Pub 2008-07-29

In 2006, in celebration of our 25th anniversary, we brought Schroeder's Antiques Price Guide to you for the first time in full color. It was so successful, we decided to keep that format from year to year, and once again are bringing it to you in full color. It still contains over 50,000 listings from reliable sources, more than 500 categories from Advertising to Zsolnay, histories and pertinent facts, and representative full-color photographs. This year's edition will start shipping in August 2008 and is guaranteed to maintain its #1 bestselling status both at Collector Books and across the country. Dealers throughout the U.S. rave annually about Schroeder's, saying it just keeps getting better and better. Undoubtedly this year's edition will be the best! You will be pleased it has kept its new look, and even happier that it is available at one of the lowest prices you'll find for general antiques guides.

Guidelines for Initiating Events and Independent Protection

Layers in Layer of Protection Analysis CCPS (Center for Chemical Process Safety) 2015-02-03 The book is a guide for Layers of Protection Analysis (LOPA) practitioners. It explains the onion skin model and in particular, how it relates to the use of LOPA and the need for non-safety instrumented independent protection layers. It provides specific guidance on Independent Protection Layers (IPLs) that are not Safety Instrumented Systems (SIS). Using the LOPA methodology, companies typically take credit for risk reductions accomplished through non-SIS alternatives; i.e. administrative procedures, equipment design, etc. It addresses issues such as how to ensure the effectiveness and maintain reliability for administrative controls or "inherently safer, passive" concepts. This book will address how the fields of Human Reliability Analysis, Fault Tree Analysis, Inherent Safety, Audits and Assessments, Maintenance, and Emergency Response relate to LOPA and SIS. The book will separate IPL's into categories such as the following: Inherent Safety eliminates a scenario or fundamentally reduces a hazard Preventive/Proactive prevents initiating event from occurring such as enhanced maintenance Preventive/Active stops chain of events after initiating event occurs but before an incident has occurred such as high level in a tank shutting off the pump. Mitigation (active or passive) minimizes impact once an incident has occurred such as closing block valves once LEL is detected in the dike (active) or the dike preventing contamination of groundwater (passive).
