Programming of Computer Numerically Controlled Machines Kenneth W. Evans 2007 With its wide range of data about the selection of tools, cutting speeds, and the technology of machining, this book would be a handy on-the-job reference for engineers, programmers, supervisors, and machine operators, besides serving as a proven and effective textbook for anyone learning CNC programming for the first time."--BOOK JACKET.

Huebner's Machine Tool Specs: Threading through turning machines 1980

Parametric Programming for Computer Numerical Control Machine Tools and Touch Probes Mike Lynch 1997 Until now, parametric programming has been the best-kept secret of CNC! This new book demystifies this simple yet sophisticated programming tool in an easy-to-understand tutorial format, and presents a comprehensive how-to of parametric programming from a user's point of view. Focusing on three of the most popular versions of parametric programming - Fanuc's custom macro B, Okuma's user task 2, and Fadal's macro - the book describes what parametric programming is, what it can do, and how it does it more efficiently than manual programming. Along with a host of program-simplifying techniques included in the book, you're treated to descriptions of how to write, set-up and run general subprograms simulate the addition of control options and integrate higher level programming capabilities at G-code level.

Comprehensive introduction to manufacturing process planning in the context of the latest techniques being used in industry Manufacturing Process Planning is a comprehensive guide to the intricacies of the manufacturing planning process that leads readers through each stage of planning while providing practical examples that illustrate the manufacturing activities taking place at every juncture. Beginning with the fundamentals, the book bridges the gap between technical documents and product specifications, and how the information they contain can be effectively applied on the shop floor. The book focuses around four key areas: selection of manufacturing processes, process planning in sand casting, process planning in machining, and process planning in inspection. Each chapter highlights best practices for activities such as casting, mold design, machining sequence identification, geometrical validation, CNC programming, the preparation of inspection reports, and more. Special attention is paid to

manufacturing cost estimation and pricing, ensuring that the production process is not only feasible but also cost-effective. To enhance the learning experience, the book comes complete with an active learning project brief and tutorial sessions covering casting simulation, pattern design, and CNC simulation using freely available software.

Manufacturing Process Planning includes information on: Fundamentals of casting, including heating the metal, pouring the molten metal, solidification and cooling, determining casting quality, and performing cleaning operations Definition and selection of workholding systems, covering principles of workholding, types of workholding systems, and general purpose of workholding devices for turning and milling Machine and cutting tool selection, and process parameter selection, covering specific guidelines in turning, milling, and drilling Documents for process planning, including process flow charts, routing sheets, and operation and tooling lists Providing a hands-on approach to mastering the principles of manufacturing process planning, Manufacturing Process Planning is an ideal resource for undergraduate and graduate academic courses that incorporate a lab component, as well as production planning supervisors and managers looking to hone their knowledge base.
