Reading for Thinking Laraine Flemming

1999-07-27 The highest-level text in Flemming's popular series, *Reading for Thinking* helps students develop critical thinking skills through high-interest reading selections. Appreciated by instructors for its clear instruction and interesting activities, the text offers students a guide to the strategies essential for good reading comprehension. A sustained focus on critical thinking teaches students to evaluate ideas encountered in textbooks, magazines, and newspapers in Part 1; then the focus shifts to their own thinking in Part 2; and finally to the expression of their points of view in Part 3.

Elementary and Middle School Mathematics

John A. Van de Walle 1998 John A. Van de Walle has written a book that helps readers make sense of mathematics and become confident in their ability to teach mathematics to children K to 8. *Elementary and Middle School Mathematics* consists of 16 chapters reflecting the view that all mathematics can be taught through a problem-solving approach that motivates children and builds their confidence as they learn. This book thoroughly discusses the new standards and clearly develops four key aspects of teaching mathematics: the nature of mathematics as a science of pattern and order; an understanding of how children learn mathematics; a problem solving view of teaching mathematics; and specific methods for integrating assessment with instruction. Simple yet effective classroom activities are woven throughout the chapters as well as suggestions for technology and literature.
