Stretching the School Dollar Frederick M. Hess 2010-09-01

Simultaneous pressures to reduce costs and increase student achievement have never been greater than they are today. Not only is cost-cutting essential in this era of tightened resources, argue Hess and Osberg, but eliminating inefficient spending is critical for freeing up resources to drive school reform. *Stretching the School Dollar* book brings together a dynamic group of authors—scholars, consultants, journalists, and entrepreneurs—who offer fresh insights into an issue no school or district can afford to ignore. *Stretching the School Dollar* is a volume in the Educational Innovations series.

Science-Mart Philip Mirowski 2011-04-29 This trenchant study analyzes the rise and decline in the quality and format of science in America since World War II. During the Cold War, the U.S. government amply funded basic research in science and medicine. Starting in the 1980s, however, this support began to decline and for-profit corporations became the largest funders of research. Philip Mirowski argues that a powerful neoliberal ideology promoted a radically different view of knowledge and discovery: the fruits of scientific investigation are not a public good that should be freely available to all, but are commodities that could be monetized. Consequently, patent and intellectual property laws were greatly strengthened, universities demanded patents on the discoveries of their faculty, information sharing among researchers was impeded, and the line between universities and corporations began to blur. At the same time, corporations shed their in-house research laboratories, contracting with independent firms both in the States and abroad to supply new products. Among such firms were AT&T and IBM, whose outstanding research laboratories during much of the twentieth century

produced Nobel Prize-winning work in chemistry and physics, ranging from the transistor to superconductivity. *Science-Mart* offers a provocative, learned, and timely critique, of interest to anyone concerned that American science—once the envy of the world—must be more than just another way to make money.

Does Transnational Mobilization Work for Language Minorities?

André Michael Hein 2014 This study scrutinizes the significance of transnational mobilization for language minorities, both with regard to their ability and their motivation to undertake such action. It is designed as interpretative case study on Romanian minorities in the post-communist countries of Serbia, Bulgaria, Ukraine, and Hungary. The book concentrates on immobile and marginal groups outside the focus of international politics and research. It contributes to recent research on cosmopolitanism: only an in-depth study of actors' everyday reality can produce qualified claims on the tense relationship between local rootedness on the one hand and possibilities for international mobility on the other. This, in turn, is vital to assess the vigor of international processes such as globalization and European integration. Reforming Higher Education Christine Musselin 2013-10-07 This book analyzes the reforms that led to a differentiated landscape of higher education systems after university practices and governance were considered poorly adapted to contemporary settings and to their new missions. This has led to a growing institutional differentiation in many higher education systems. This differentiation has certainly contributed to making the institutional landscape more diverse across and within higher education systems. This book covers this diversity. Each part corresponds to a different but complementary way of looking at reforms and highlights what can be learnt on specific cases by adopting a specific perspective. The first part analyzes the ongoing reforms and their evolution, identifies their internal contradictions, as well as the redefinitions and reorientations they experience, and reveals the ideas, representations, ideologies and theories on which they are built. The second part includes comparison between countries but also other comparative perspectives such as how one reform is developed in different regions of the same country, as well as how comparable reforms are declined to different sectors. The last part addresses the impact of the reforms. What is known about the effectiveness of such instruments on higher education systems? This part shows that reforms provoke new power games and reconfigure power relations.

The SAGE Handbook of Housing Studies David F Clapham 2012-04-20 Cross-disciplinary and critical in its approach, The SAGE Handbook of Housing Studies is an elucidating look at the key issues within the field. It covers the study of housing retrospectively, but also analyses the future directions of research and theory, demonstrating how it can contribute to wider debates in the social sciences. A comprehensive introductory chapter is followed by four parts offering complete coverage of the area: Markets: examines the perception of

housing markets, how they function in different contexts, and the importance of housing behaviour and neighbourhoods Approaches: looks at how other disciplines - economics, geography, and sociology - have informed the direction of housing studies Context: traces the interactions between housing studies and other aspects of society, providing context to debate housing through issues of space, social, welfare and the environment. Policy: is a multi-disciplinary and comprehensive take on the major policy issues and the causes and possible solutions of housing problems such as regeneration and homelessness. Edited by leading names in the field and including international contributions, the book is a stimulating, wide-ranging read that will be an invaluable resource for academics and researchers in geography, urban studies, sociology, social policy, economics and politics.
