Contemporary Issues in Curriculum Allan C. Ornstein 2007 Balanced yet eclectic in its approach, *Contemporary Issues in Curriculum* reflects the emergent trends in the field of curriculum. The fourth edition of this issues-oriented collection offers 40 articles by the major thinkers in curriculum study. Designed for students in curriculum, instruction, administration, and teacher education, it explores the issues that affect implementation, planning, and evaluation of curriculum at all levels of learning. The editors have organized the collection into six Parts: Curriculum and Philosophy, Curriculum and Teaching, Curriculum and Learning, Curriculum and Instruction, Curriculum and Supervision, and Curriculum and Policy. The readings reflect both traditionally held beliefs and those that are more controversial in nature, providing students and practitioners the opportunity to investigate the breadth of issues that affect curriculum and to access such information in a single source. Readers are encouraged to examine and debate these issues, to formulate their own ideas, and to shape what direction the field of curriculum should take. The fourth edition features 14 new articles, by such leading scholars as John Goodlad, Linda Darling-Hammond, Evans Clinchy, Andrew Gitlin, Stacey Ornstein, Geneva Gay, David Perkins, Harry Wong, Frank Levy, Richard Murnane, Robert Slavin, Allan Odden,

Richard Rothstein, Alan Ornstein, and Edward Pajak.

Statistics and Research Methodology: A Gentle Conversation P. Michael Politano 2018-08 *A Gentle Conversation*, Third Edition, is meant to be a student-friendly introduction to research methodology and statistics, aimed at allaying students' fears and anxieties about studying these topics. Our more conversational approach should help students feel as if the authors are standing by them, explaining concepts and procedures as they read through the text. We use examples throughout to clarify concepts and strengthen the connections between statistics, data, and research questions. The authors emphasize understanding not only the manipulation of statistical data, but also what the actual findings mean in relation to significance issues, samples, and populations. We cover effect size for all statistical inquiries, from correlation to ANOVA.

Student-involved Classroom Assessment Richard J. Stiggins 2001 For courses in Classroom Assessment, Test and Measurement, and training of teachers. This core text for courses in classroom assessment is the leading text for courses where the focus is squarely on teaching teachers and preservice teachers how to assess students in their day-to-day classrooms. It takes a stronger focus than any other book on integrating assessment and instruction. And it provides very clear guidance on how to construct all types of items and tests, but also explains better than any other text what each type of item can and cannot assess.

The Flickering Mind Todd Oppenheimer 2004-12-07 *The Flickering Mind*, by National Magazine Award winner Todd Oppenheimer, is a landmark account of the failure of technology to improve our schools and a call for renewed emphasis on what really works. American education faces an unusual moment of crisis. For decades, our schools have been beaten down by a series of curriculum fads, empty crusades for reform, and stingy funding. Now education and political leaders have offered their biggest and most expensive promise ever—the miracle of computers and the Internet—at a cost of approximately \$70 billion just during the decade of the 1990s. Computer technology has become so prevalent that it is transforming nearly every corner of the academic world, from our efforts to close the gap between rich and poor, to our

hopes for school reform, to our basic methods of developing the human imagination. Technology is also recasting the relationships that schools strike with the business community, changing public beliefs about the demands of tomorrow's working world, and reframing the nation's systems for researching, testing, and evaluating achievement. All this change has led to a culture of the flickering mind, and a generation teetering between two possible futures. In one, youngsters have a chance to become confident masters of the tools of their day, to better address the problems of tomorrow. Alternatively, they can become victims of commercial novelties and narrow measures of ability, underscored by misplaced faith in standardized testing. At this point, America's students can't even make a fair choice. They are an increasingly distracted lot. Their ability to reason, to listen, to feel empathy, is quite literally flickering. Computers and their attendant technologies did not cause all these problems, but they are quietly accelerating them. In this authoritative and impassioned account of the state of education in America, Todd Oppenheimer shows why it does not have to be this way. Oppenheimer visited dozens of schools nationwide—public and private, urban and rural—to present the compelling tales that frame this book. He consulted with experts, read volumes of studies, and came to strong and persuasive conclusions: that the essentials of learning have been gradually forgotten and that they matter much more than the novelties of technology. He argues that every time we computerize a science class or shut down a music program to pay for new hardware, we lose sight of what our priority should be: “enlightened basics.” Broad in scope and investigative in treatment, *The Flickering Mind* will not only contribute to a vital public conversation about what our schools can and should be—it will define the debate.
