Holt Chemistry Ralph Thomas Myers 2004

Spreadsheets for Chemists Gordon Filby 1995 A practical guide 'Spreadsheets for Chemists' shows chemists of all levels how to use spreadsheet programs in their daily work. It highlights the possibilities provided by Lotus 1-2-3, the most widely used spreadsheet program in the sciences. Apart from hundreds of example fragments, it features: * Detailed discussion of the most relevant functions and all the () macro commands. * An accompanying diskette containing 57 worksheets involving many different fields of chemical research and teaching. * An extensive glossary of spreadsheet terms. * Three appendices covering 1-2-3's competitors and add-in packages, the use of Windows-based spreadsheets and how what-if analysis and back-solving is applied. Although the disk examples were developed for Lotus 1-2-3 DOS Versions 2.x

(x=2-4), the worksheets are compatible with the newer Windows versions and those of their main competitors, Borland's Quattro Pro and Microsoft's Excel. Several compatible spreadsheets (AsEasyAs, Proqube) might also be as used as inexpensive alternatives. The author is a senior scientist at the Nuclear Research Centre in Karlsruhe, Germany. He has been using spreadsheet software for nearly ten years successfully in a variety of chemical problems.

Handbook on Material and Energy Balance Calculations in Material Processing, Includes CD-ROM Arthur E. Morris 2011-09-06 "This book approaches the subject of material and energy balances from two directions. First, it emphasizes the fundamental principles of the conservation of mass and energy, and the consequences of these two principles. Second it applies the techniques of computational chemistry to materials processing, and introduces new software developed by the author especially for material and heat balances. The third edition reflects the changes in the professional engineer's practice in the last 30 years, reflecting the dramatic shift away from metallurgical engineering and the extractive industry towards materials engineering. A large and growing number of recent graduates are employed in such fields as semiconductor processing, environmental engineering, and the production and processing of advanced and exotic materials for aerospace, electronic and structural applications. The advance in computing power and software for the desktop computer has significantly changed the way engineers make computations, and the biggest change comes from the computational approach used to solve problems. The spreadsheet program Excel is used extensively throughout the text as the main computational "engine" for solving material and energy balance equations, and for statistical analysis of data. The use of Excel and the introduction of the add-in programs enables the study of a range of variables on critical process parameters, and emphasis is placed on multi-device flowsheets with recycle, bypass, and purge streams whose material and heat balance equations were previously too complicated to solve by the normally-used hand calculator. The Excel-based program FlowBal helps the user set up material and heat balance equations for processes with multiple streams and units"--

Chemistry James N. Spencer 2002-02-28 The second edition of Spencer's Chemistry: Structure and Dynamics has been the most successful reform project published for the General Chemistry course. The authors have revised the text, by building on the recommendations of the ACS's Task Force on the General Chemistry Curriculum and suggestions from the adopters of the first edition. This innovative text provides a fifteen-chapter introduction to the fundamental concepts of Chemistry. A collection of additional topics at the end of each chapter allow instructors to supplement and tailor their courses according to individual need. Three major themes link the content of the book: the process of science, the relationship between molecular structure and physical/chemical properties, and the relationship between the microscopic and macroscopic levels.
