Guidelines on Food Fortification with Micronutrients Richard Hurrell

2006 This publication contains practical guidance on the design,

implementation and evaluation of appropriate food fortification

programmes. They are designed primarily for use by nutrition-related

public health programme managers, but should also be useful to all those working to control micronutrient malnutrition, including the food industry. The guidelines are written from a nutrition and public health perspective, and topics discussed include: the concept of food fortification as a potential strategy for the control of micronutrient malnutrition; the prevalence, causes, and consequences of micronutrient deficiencies, and the public health benefits of micronutrient malnutrition control; technical information on the various chemical forms of micronutrients that can be used to fortify foods; regulation and international harmonisation, communication, advocacy, consumer marketing and public education.

The Use of Recovery Factors in Trace Analysis Michael Parkany

1996 The September 1996 proceedings are devoted to determining when recovery factors are justified, and developing coherent analysis descriptions for procedural standards and protocols. The eight lectures review the present less than ideal situation, offering practical solutions from the field regarding recovery factors in analytical chemistry, inorganic analysis, the use of radioisotopic tracers, the use of recovery data in veterinary drug residue analysis, and for the analysis of organochlorine pesticides in water samples. The volume also features the report of the 20th session of the Codex Committee on Methods of Analysis and Sampling. Includes a selective listing of international standards. Sensory Analysis for Food and Beverage Quality Control David Kilcast

2010-05-24 Producing products of reliable quality is vitally important to the food and beverage industry. In particular, companies often fail to ensure that the sensory quality of their products remains consistent, leading to the sale of goods which fail to meet the desired specifications or are rejected by the consumer. This book is a practical guide for all

those tasked with using sensory analysis for quality control (QC) of food and beverages. Chapters in part one cover the key aspects to consider when designing a sensory QC program. The second part of the book focuses on methods for sensory QC and statistical data analysis. Establishing product sensory specifications and combining instrumental and sensory methods are also covered. The final part of the book reviews the use of sensory QC programs in the food and beverage industry. Chapters on sensory QC for taint prevention and the application of sensory techniques for shelf-life assessment are followed by contributions reviewing sensory QC programs for different products, including ready meals, wine and fish. A chapter on sensory QC of products such as textiles, cosmetics and cars completes the volume. Sensory analysis for food and beverage quality control is an essential reference for anyone setting up or operating a sensory QC program, or researching sensory QC. - Highlights key aspects to consider when designing a quality control program including sensory targets and proficiency testing - Examines methods for sensory quality control and statistical data analysis - Reviews the use of sensory quality control programs in the food and beverage industry featuring ready meals, wine and fish

Codex Alimentarius Commission Procedural Manual Food and Agriculture Organization of the United Nations 2025-03-20 The Procedural Manual of the Codex Alimentarius Commission helps national delegations and international organizations attending as observers, participate effectively in the work of the Joint FAO/WHO Food Standards Programme. It sets out the basic rules of procedure, procedures for the elaboration of Codex standards and related texts, and basic definitions and guidelines for the operation of Codex committees. It also gives the membership of the Codex Alimentarius Commission. The 30th edition of the Codex Procedural Manual continues to work towards a

harmonization of language, particularly around synonymous terminology, thus setting precedent for Codex's other written materials. Specifically, this latest edition contains three changes to "Section 4.6: Risk analysis principles applied by the Codex Committee on Residues of Veterinary Drugs in Foods", 1) a revision of "Annex C: Approach for the extrapolation of maximum residue limits for veterinary drugs to one or more species"; 2) the inclusion of "Annex D: Criteria and procedures for the establishment of action levels for residues of veterinary drugs in food of animal origin resulting from unavoidable and unintentional veterinary drug carryover in non-target animal feed"; and 3) a consequential amendment to paragraph 133, Establishment of priority list. In "Section 5.1: Table of committees, document references and terms of reference", following the decision by the Commission to reactivate the Codex Committee on Cereals, Pulses and Legumes, this committee was moved from "commodity committees (adjourned sine die)" to "commodity committees (active)". Finally, editorial changes have been made to more consistently apply abbreviations and provide more accurate cross-referencing by numbering subsections.
