The Cardiovascular System

Alan Noble 2005 A textbook on the cardiovascular system for medical students, offering an integrated coverage of the basic science and major diseases of the system.

Integrated coverage of the structure, function and major diseases of the cardiovascular system - highly suitable for systems courses as taught in the new medical curriculum.

Coverage of the basic science is clinically driven - a common clinical presentation introduces

each major topic. Clinical cases are used and explained in the chapter rather than merely being present to provide additional interest. Coverage of major diseases of the cardiovascular system equips students for the contact with patients which now occurs much earlier in the medical course. Attractive, open two colour page design with objectives defined at the start of each chapter and self-assessment at the end.

Human Behavior in the

Social Environment José B. Ashford 2001 In this revision of their ground-breaking book, the authors offer an even more balanced, integrated, and applied text. In addition, the book's multidimensional framework, integration of the biopsychosocial dimensions for assessing social functioning, attention to foundation knowledge and diversity, and use of case studies to illuminate the applied aspects of HBSE content all combine to give readers an experience that is meaningful and exciting. Using a unique, multidimensional framework for assessing behavior, the authors look at biopsychosocial development across the life span. Essentially, the framework provides a concrete tool for the reader to assess human behavior from a perspective that truly reflects

the values and knowledge base of the social work profession. Lively and comprehensive, this book succeeds by helping students connect foundation knowledge with practice concerns.
