Aircraft Engineering

Maintenance Practice Lloyd

Dingle 2007-05-07 The need for a definitive series of textbooks dedicated to Aircraft

Engineering maintenance has never been greater. Employers are increasingly looking at FE qualifications to provide future engineers. The internationally recognised standard, Joint Aviation Requirement Part 66, Maintenance Personnel Licensing (JAR 66) sets a new standard for licenses, with specific focus on quality at source, human factors awareness and clear accountability for safety.

Aircraft Engineering

Maintenance Practice will

cover modules 6, 7, 9 and 10 of the Joint Aviation Authorities

(JAR) syllabi, to a depth and level appropriate for Aircraft

Maintenance Certifying

Technicians. Also, coverage will include the appropriate Units/Modules from the City and Guilds Certificate and EDEXCEL National and Higher National. The book will also contain information which will be of direct benefit to those practising as aircraft maintenance technicians within HM Forces. Since the book is concerned with maintenance practice, it will cover all of Section 3, Aircraft Hardware and Engineering Practice using a CD ROM. The book develops from first principles and progresses to the standards required by practicing aircraft maintenance technicians and engineers. Multiple choice questions will be provided at the end of each major section, and will be sub-divided to reflect the examination subject matter for the JAR modules. Short answer, long answer and essay type questions will also be provided.

Future Propulsion Systems and Energy Sources in Sustainable Aviation Saeed Farokhi 2020-01-21 A comprehensive review of the

science and engineering behind future propulsion systems and energy sources in sustainable aviation Future Propulsion Systems and Energy Sources in Sustainable Aviation is a comprehensive reference that offers a review of the science and engineering principles that underpin the concepts of propulsion systems and energy sources in sustainable air transportation. The author, a noted expert in the field, examines the impact of air transportation on the environment and reviews alternative jet fuels, hybrid-electric and nuclear propulsion and power. He also explores modern propulsion for transonic and supersonic-hypersonic aircraft and the impact of propulsion on aircraft design. Climate change is the main driver for the new technology development in sustainable air transportation. The book contains critical review of gas turbine propulsion and aircraft aerodynamics; followed by an insightful presentation of the aviation impact on

environment. Future fuels and energy sources are introduced in a separate chapter. Promising technologies in propulsion and energy sources are identified leading to pathways to sustainable aviation. To facilitate the utility of the subject, the book is accompanied by a website that contains illustrations, and equation files. This important book: Contains a comprehensive reference to the science and engineering behind propulsion and power in sustainable air transportation Examines the impact of air transportation on the environment Covers alternative jet fuels and hybrid-electric propulsion and power Discusses modern propulsion for transonic, supersonic and hypersonic aircraft Examines the impact of propulsion system integration on aircraft design Written for engineers, graduate and senior undergraduate students in mechanical and aerospace engineering, Future Propulsion Systems and Energy Sources in Sustainable Aviation explores

the future of aviation with a guide to sustainable air transportation that includes alternative jet fuels, hybrid-electric propulsion, all-electric and nuclear propulsion. Engineering A Level Curriculum Support Pack Mike Tooley 2012-09-10 Used alongside the students' text, Engineering A Level, this pack offers a complete suite of teaching resource material and photocopiable handouts for the compulsory AS and A2 units of the 2005 GCE Engineering syllabus from Edexcel. Coverage is given to the three units required at AS Level, and the 3 additional A2 units required for completion of the A Level award. Mike Tooley provides the essential resources needed by busy teachers and lecturers, as well as a bank of student-centred practical work and revision material, that will enable students to gain the skills, knowledge and understanding they require. Also available in electronic form for adopters upon request, this pack will save teachers and course

teams many hours' work preparing handouts and assignments, and is freely photocopyable within the purchasing institution. The pack includes: * Exercises to support and develop work in the accompanying student text * Planned projects which will enable students to display a wide range of skills and use their own initiative * Assessment materials * Reference material for use as hand-outs * Background on running the new Engineering A Level * Teachers' notes supporting activities in the students' book * Additional web-based resources for lecturers available on a companion website. Mike Tooley is formerly Vice Principal and Head of Faculty of Engineering at Brooklands College, Surrey, and is the author of many best-selling engineering and electronics books.

Aircraft Engineering

Principles Lloyd Dingle

2013-09-23 Aircraft Engineering Principles is the essential text for anyone studying for licensed A&P or Aircraft Maintenance Engineer status. The book is written to meet the requirements of JAR-66/ECAR-66, the Joint Aviation Requirement (to be replaced by European Civil Aviation Regulation) for all aircraft engineers within Europe, which is also being continuously harmonised with Federal Aviation Administration requirements in the USA. The book covers modules 1, 2, 3, 4 and 8 of JAR-66/ECAR-66 in full and to a depth appropriate for Aircraft Maintenance Certifying Technicians, and will also be a valuable reference for those taking ab initio programmes in JAR-147/ECAR-147 and FAR-147. In addition, the necessary mathematics, aerodynamics and electrical principles have been included to meet the requirements of introductory Aerospace Engineering courses. Numerous written and multiple choice questions are provided
